Introduction. In animals, including humans, the brain is the control center for the body. As a part of the nervous system, the brain receives and makes sense of signals sent from nerve cells in the body. The brain also sends information to the body's muscles and organs. The brains of humans and other vertebrates (animals with a backbone)...

Hippocampus: Hippocampus, region of the brain that is associated primarily with memory. The hippocampus is thought to be principally involved in storing long-term memories and in making those memories resistant to forgetting. It is also thought to play an important role in spatial processing and navigation.
