Compound Inequalities Answers

A compound inequality is an equation with two or more inequalities joined together with either "and" or "or" (for example, and; or). When two inequalities are joined with and, they are often written simply as a double inequality, like: $a < x < b$. The solution of an "and" inequality is the intersection of each individual inequality in the sentence.

For all absolute value inequalities we can also express our answers in interval notation which is done the same way it is done for standard compound inequality-

Inequalities - Absolute Value Inequalities

Note that when you solve an inequality, you pretend like the inequality is an equal sign. The only thing you have to worry about is multiplying or dividing by a negative number; when you do this, you have to reverse the inequality symbol (change $<$ to $>$, or $>$ to $<$). You can see an example of this in the last equation below.
