Building Linear Programming models. Writing optimisation models that only use linear mathematical equations and inequalities is not easy. However, most of the time you want to build these "linear programming" models (and avoid non-linear models) because these are easier and more reliable to solve using packages such as OpenSolver.

4 8 16 In the first call to the function, we only define the argument a, which is a mandatory, positional argument. In the second call, we define a and n, in the order they are defined in the function. Finally, in the third call, we define a as a positional argument, and n as a keyword argument.. If all of the arguments are optional, we can even call the function with no arguments.
