Use the alternate value for animation-direction (and you don't need to add any keframes this way).. alternate. The animation should reverse direction each cycle. When playing in reverse, the animation steps are performed backward. In addition, timing functions are also reversed; for example, an ease-in animation is replaced with an ease-out animation when played in reverse.

Loaders and progress bars are very popular in recent years.Today many web applications and

websites use loader animations and progress bars to boost the performance and make them more attractive and stylish. Loading animations and progress bars are really important for users because they signal the user that something is still going on.

### **27 jQuery & CSS3 Loading Animation and Progress Bar ...**

Abstract. This draft contains the features of CSS relating to borders and backgrounds. The main extensions compared to level 2 are borders consisting of images, boxes with multiple backgrounds, boxes with rounded corners and boxes with shadows.. CSS is a language for describing the rendering of structured documents (such as HTML and XML) on screen, on paper, in speech, etc.

### **CSS Backgrounds and Borders Module Level 3**

Phil. No problem, I managed to work out a way to write my own script with functions declaring hidden and other content. The trick I have found when building on this code base is to notice that this works on a sequential basis through the field sets. field set 1 = 1, field set 2 = 2 etc.

### **Multi Step Form with Progress Bar using jQuery and CSS3**

Abstract. This CSS module defines a two-dimensional grid-based layout system, optimized for user interface design. In the grid layout model, the children of a grid container can be positioned into arbitrary slots in a predefined flexible or fixed-size layout grid.
