D. Decay: Disintegration of atomic nuclei resulting in the emission of alpha or beta particles (usually with gamma radiation). Also the exponential decrease in radioactivity of a material as nuclear disintegrations take place and more stable nuclei are formed. Decommissioning: Permanent removal of a facility (eg reactor) from service, also the subsequent actions of safe storage, dismantling ...

Nuclear weapon - Pakistan: Pakistan took advantage of the Atoms for Peace program by sending students abroad for training in nuclear technologies and by accepting an American-built research reactor, which began operation in 1965. Although its military nuclear research up to that point had been minimal, the situation soon changed. Pakistan's quest for the atomic bomb was in direct response to ...

Enrico Fermi (Italian: [en'ri:ko 'fermi]; 29 September 1901 – 28 November 1954) was an Italian and naturalized-American physicist and the creator of the world's first nuclear reactor, the Chicago Pile-1. He has been called the "architect of the nuclear age" and the "architect of the atomic bomb". He was one of very few physicists to excel in both theoretical physics and experimental physics.

Nuclear weapon - Principles of atomic (fission) weapons: When bombarded by neutrons, certain isotopes of uranium and plutonium (and some other heavier elements) will split into atoms of lighter elements, a process known as nuclear fission. In addition to this formation of lighter atoms, on average between 2.5 and 3 free neutrons are emitted in the fission process, along with considerable energy.

Particle physics (also known as high energy physics) is a branch of physics that studies the nature of the particles that constitute matter and radiation. Although the word particle can refer to various types of very small objects (e.g. protons, gas particles, or even household dust), particle physics usually investigates the irreducibly smallest detectable particles and the fundamental ...

by Jacques Chauveheid. Read the whole article Download the ZIP file. Abstract Contrasting with dark energy cosmology seemingly viewing the universe as a star whose gravitation exclusively acts on its own source, a two-body configuration leads to Schwarzschild's cosmological time coupled with the negative source mass of a primeval black hole.

1. Introduction. One promising solution for the energy storage of intermittent renewable electricity sources is to store the energy in the form of chemical bonds, i.e., to convert sunlight and wind to energy-dense fuels [ , , ]. In addition to enabling more reliable utilities with longer term seasonal energy storage, conversion to fuels has the added benefit of concentrating these diffuse ...
