Exploring The Solar System Peter

Any natural solar system object other than the Sun, a planet, a dwarf planet, or a moon is called a small body; these include asteroids, meteoroids, and comets. Most of the several hundred thousand asteroids, or minor planets, orbit between Mars and Jupiter in a nearly flat ring called the asteroid belt.

The NASA JPL Solar System Ambassador Public Speaker ...

Many parts of the outer Solar System have been considered for possible future colonization. Most of the larger moons of the outer planets contain water ice, liquid water, and organic compounds that might be useful for sustaining human life.. Colonies in the outer Solar System could also serve as centers for long-term investigation of the planet and the other moons. In particular, robotic ...
