In physics, a force is said to do work if, when acting, there is a displacement of the point of application in the direction of the force. For example, when a ball is held above the ground and then dropped, the work done on the ball as it falls is equal to the weight of the ball (a force) multiplied by the distance to the ground (a displacement).

Spring Schedule of Classes | bossier parish community college

Since publication of this article in 1980, studies of the sun's size have yielded different results. Currently, scientists are not united enough concerning any broadscale trends to support age estimates based on the size of the sun. In his 1998 article "The Young Faint Sun Paradox and the Age of the Solar System," Dr. Danny Faulkner provided an updated perspective that is more consistent ...
