Here, we describe the development and validation of a new analytical method to quantify iodine as iodide (I⁻) using an isocratic HPLC system with UV detection; algal iodine was converted to I⁻ via dry alkaline incineration. The method was successfully applied to 19 macroalgal species from three taxonomic groups and five commercially ...

A simple HPLC method was developed and validated for quantitation of gabapentin in pure form. The HPLC separation was achieved on a C 18 5 µm Waters column (150 mm × 4.6 mm) using a mobile phase of methanol - potassium dihydrogen orthophosphate solution (20:80, v/v) containing 10% NaOH to adjust pH 6.2 at a flow rate of 1.0 ml/min. The UV detector was operated at 275 nm.

This article provides a brief review of significant developments in HPLC impacting pharmaceutical analysis in the last decade. Topics discussed are listed below and selected items are shown in a representative timeline in Figure 1. Instrumentation: Ultra-high pressure LC (UHPLC) going mainstream.

Newer Developments in HPLC Impacting Pharmaceutical ...

High-performance liquid chromatography (HPLC; formerly referred to as high-pressure liquid chromatography) is a technique in analytical chemistry used to separate, identify, and quantify each component in a mixture. It relies on pumps to pass a pressurized liquid solvent containing the sample mixture through a column filled with a solid adsorbent material.
