About ISEAT_

Electroacoustics is concerned with the design of headphones, microphones, loudspeakers, sound reproduction systems and recording technologies. Examples of electroacoustic design include portable electronic devices (e.g. mobile phones, portable media players, and tablet computers), sound systems in architectural acoustics, surround sound and wave field synthesis in movie theater and vehicle audio.

An audio power amplifier (or power amp) is an electronic amplifier that amplifies low-power electronic audio signals such as the signal from radio receiver or electric guitar pickup to a level that is high enough for driving loudspeakers or headphones. Audio power amplifiers are found in all manner of sound systems including sound reinforcement, public address and home audio systems and musical ...

Audio power amplifier - Wikipedia

TERMINOLOGY: Some visitors may prefer the term “capacitor mic” to “condenser mic,” and that’s fine. Since most manufacturers seem to have used the older term, and because many of the microphones featured here are from years past, the decision was made to stick with “condenser.”

The last LA session of the \$60,000 Ribbon Microphone Shootout was recorded by Randy at the Disney Character Voices studio in Burbank, CA.. We were blessed to have character voice master Corey Burton on hand for this test. Corey cooked up four different voices to exercise each mic — and then delivered them, one after another, damn near identically 16 times in a row.

After the introduction of the silver single ended 46 amps. and the first set of differential 46 amps, these are the logical next step. A pair of 46 tubes driving another pair of 46 through a silver interstage transformer and both driver tubes loaded with individual silver chokes. A similar configuration in the output stage and silver input transformers for splitting the phase for the different ...

Crosstalk cancellation is critical to rendering of binaural signals using loudspeakers. This study explores three different inversion techniques for selecting the optimum parameter for crosstalk filter applied to over 200 loudspeaker configurations. To obtain optimum parameters the bandwidth, filter length, and regularization constant were varied for each configuration and method.

1. Introduction. Driver sleepiness leads to worsened decision making, slower reaction times, and reduced attention to the forward roadway (Anderson & Horne, 2013; Dinges, 1995, NCSDR/NHTSA 1998). As such, driver sleepiness is an imperative contributing factor to vehicle crashes and traffic injuries (Horne and Reyner, 1999, Philip et al., 2005). The National Highway Traffic Safety
