Live-bearing Halfbeak - Hemiramphidae The Hemiramphidae family is known as the Live-bearing Halfbeaks. They sport a straight pike type body shape and have a beak type mouth. The name "halfbeak" comes from a distinctive jaws, where the lower jaw is significantly longer than the upper jaw.

Livebearing Aquarium Fish - Animal World

But for whatever reason, wrestling halfbeaks are prone to fertility problems as they age. Many aquarists have noticed that while their halfbeaks initially produced quite large broods of 20 or more fry, successive broods are smaller and miscarriages are more common. Some fishkeepers think diet is to blame, while others say water chemistry.

7 Forgotten Livebearers (Full Article)

Live-bearing aquarium fish. Among aquarium fish, livebearers are nearly all members of the Poeciliidae family and include guppies, mollies, platies and swordtails . The advantages of livebearing to the aquarist are that the newborn juvenile fish are larger than newly-hatched fry, have a lower chance of mortality and are easier to care for.

Livebearers - Wikipedia

Zenarchopteridae. The members in the family are mainly found in fresh and brackish water of tropical Asia and New Guinea, but the genus Zenarchopterus also includes marine species from the Indo-Pacific. Several, such as the wrestling halfbeak, have become commonly traded aquarium fish.

RESTRICTED SPECIES LISTS BY STATE | MonsterFishKeepers.com

The halfbeaks' fossil record extends into the Lower Tertiary. The earliest known halfbeak is *Brachyrhamphus bolcensis* from the Eocene at Monte Bolca, Italy. Apart from differences in the length of the upper and lower jaws, recent and fossil halfbeaks are distinguished by the fusion of the third pair of upper pharyngeal bones into a plate.

Halfbeak - Wikipedia

Livebearers vs. Egg-laying fish. It's pretty common to see questions on the forums about fish pregnancy, no matter what species of fish is being kept. But only livebearing fish can actually become pregnant. All the other species, such as Tetras, Rasboras, Corydoras, Angel fish and so on, are egg layers. Egg laying fish cannot become pregnant.
