Lehninger Principles Biochemistry David Nelson

Bioenergetics is a field in biochemistry and cell biology that concerns energy flow through living systems. This is an active area of biological research that includes the study of the transformation of energy in living organisms and the study of thousands of different cellular processes such as cellular respiration and the many other metabolic and enzymatic processes that lead to production ...

Bioenergetics - Wikipedia

In biochemistry, a ribonucleotide is a nucleotide containing ribose as its pentose component. It is considered a molecular precursor of nucleic acids. Nucleotides are the basic building blocks of DNA and RNA. The monomer itself from ribonucleotides forms the basic building blocks for RNA. However, the reduction of ribonucleotide, by enzyme ribonucleotide reductase (RNR), forms ...

Acetaminophen was used as a pain reliever as early as the late 1800s. It was approved for use by the U.S. Food and Drug Administration in 1950, shortly after it was discovered that the closely related drug paracetin was broken down in the body to acetaminophen, and that the beneficial effects of paracetin were actually the effects of acetaminophen.

Glycerine, also called glycerol or glycerin, is an odorless chemical used as an additive in many pharmaceutical products and cosmetics. Glycerine is used in body care products as a lubricant to increase the ease of product application and as a humectant to draw moisture into the skin.

When your muscles can't get enough oxygen during a short burst of exercise, they start to make use of a pathway called lactic acid fermentation, which generates a small three-carbon compound called lactic acid or lactate as a byproduct of glucose breakdown.

What Happens to Lactic Acid After Exercise? | Livestrong.com

Estabilidad. A pesar que tanto el ADN como el ARN son moléculas estables, el ADN lo es mucho más. Esto ocurre por la utilización de desoxirribonucleótidos en vez de ribonucleótidos en su síntesis, aunque no exclusivamente por esa razón. [1] El ARN, debido a que usa ribosa y posee el grupo hidroxilo, es susceptible a hidrólisis catalizada por bases.

A glicina (do grego glykos, "doce", nome devido ao seu sabor adocicado [2]) é um dos aminoácidos codificados pelo código genético, sendo portanto um dos componentes das proteínas dos seres vivos. É codificado pelos códons GGU, GGC, GGA e GGG [3].. Devido à sua simplicidade estrutural, este aminoácido tende a ser conservado evolucionariamente em proteínas como o citocromo c, a ...

Thermogenin (auch entkoppelndes Protein, engl. Uncoupling Protein 1 bzw. UCP1 genannt) ist ein Transmembranprotein, das sich in der Mitochondrienmembran des braunen Fettgewebes findet. Durch seine Funktion kann Wärme ohne Muskelaktivität wie etwa Zittern generiert werden. Die durch UCP1 bewirkte Thermogenese ist die vorherrschende Art der Wärmeproduktion bei Winterschlaf haltenden oder ...
