Trigonometry Angles-- $\pi/7$. Trigonometric functions of for an integer cannot be expressed in terms of sums, products, and finite root extractions on real rational numbers because 7 is not a Fermat prime. This also means that the heptagon is not a constructible polygon.. However, exact expressions involving roots of complex numbers can still be derived either using the trigonometric identity

Section 7-2 : Linear Systems with Three Variables. This is going to be a fairly short section in the sense that it's really only going to consist of a couple of examples to illustrate how to take the methods from the previous section and use them to solve a linear system with three equations and three variables.
