Keith Leon Moore (born 5 October 1925 in Brantford, Ontario) is a professor emeritus in the division of anatomy, in the faculty of Surgery, at the University of Toronto, Ontario, Canada. Moore is associate dean for Basic Medical Sciences in the university's faculty of Medicine, and was Chair of Anatomy from 1976 to 1984. He is a founding member of the American Association of Clinical Anatomists ...

Keith L. Moore - Wikipedia

Tinnitus is the perception of sound in the head or the ears. The term tinnitus derives from the Latin word *tinnire*, meaning to ring. Typically, an individual perceives the sound in the absence of outside sounds, and the perception is unrelated to any external source.

Tinnitus: Introduction, Philosophy, and Classification ...

The serratus posterior superior is a thin, quadrilateral muscle, situated at the upper and back part of the thorax, deep to the rhomboid muscles.. It arises by a thin and broad aponeurosis from the lower part of the ligamentum nuchae, from the spinous processes of the seventh cervical and upper two or three thoracic vertebrae and from the supraspinal ligament.

The surface of the skin is divided into specific areas called dermatomes, which are derived from the cells of a somite. These cells differentiate into the following 3 regions: (1) myotome, which forms some of the skeletal muscle; (2) dermatome, which forms the connective tissues, including the

dermis; and (3) sclerotome, which gives rise to t...

Anatomical Course. The axillary nerve branches from the posterior cord and descends in the axilla posterior to the axillary artery and anterior to the subscapularis. It emerges from the axilla at the level of the lower border of the subscapularis, by traversing the quadrangular space. This is a space in the posterior scapular region, which is bounded by the superior margin of the teres major ...

Suboccipital Muscles. The suboccipital region is a muscle compartment, located inferior to the external occipital protuberance and the inferior nuchal line. These are anatomical landmarks on the occipital bone of the skull. It is of a pyramidal shape and includes the posterior aspects of the atlas and axis (C1 and C2 vertebrae respectively). This region comprises four pairs of small muscles:

The respiratory system includes the nose, lungs and pipe-like organs which connect them enable breathing and removal of waste products like carbon dioxide.

Respiratory system (pulmonary system) information | myVMC

The lymphatic system plays a vital role as one of the organ systems of the body. This system functions with the digestive system to absorb dietary lipids, which enter lymphatic vessels rather than blood vessels for transport. It also acts with the cardiovascular system to control the body's fluid balance.
