Plant physiology is a subdiscipline of botany concerned with the functioning, or physiology, of plants. Closely related fields include plant morphology (structure of plants), plant ecology (interactions with the environment), phytochemistry (biochemistry of plants), cell biology, genetics, biophysics and molecular biology.. Fundamental processes such as photosynthesis, respiration, plant ...

The Plant Science & Physiology 2020 theme has broad interests, which address many aspects of Plant Biology, Plant Science, Plant Physiology, Plant Biotechnology, and Plant Pathology. Research in the theme includes looking at plant resistance to parasites and pathogens, studying molecular and physiological adaptations to biotic and abiotic stress, identifying signaling mechanisms in plant ...

Gibberellin, any of a group of plant hormones that occur in seeds, young leaves, and roots.The name is derived from Gibberella fujikuroi, a hormone-producing fungus in the phylum Ascomycota (kingdom Fungi).Evidence suggests that gibberellins stimulate the growth of main stems, especially when applied to the whole plant.

Gibberellins (GAs) are plant hormones that regulate various developmental processes, including stem elongation, germination, dormancy, flowering, flower development and leaf and fruit senescence. GAs are one of the longest-known classes of plant hormone. It is thought that the (albeit unconscious) selective breeding of crop strains that were deficient in GA synthesis was one of the key drivers ...

Biochemistry: Biochemistry, study of the chemical substances and processes that occur in plants, animals, and microorganisms and of the changes they undergo during development and life. It deals with the chemistry of life, and as such it draws on the techniques of analytical, organic, and physical chemistry.

Advances in Biochemistry (AB) publishes papers in English in all fields of biochemistry and cellular and molecular biology, provided that they make a sufficient contribution to knowledge in these fields. Papers may include new results obtained experimentally, descriptions of new experimental methods of biochemical importance, or new interpretations of existing results.

A cell is separated from its surrounding environment by a physical barrier, which is the plasma membrane. This membrane is permeable to only some small lipid molecules such as steroid hormones, which can diffuse through the membrane into the cytoplasm and is impermeable to the water-soluble material including ions, proteins and other macromolecules.

A substance that is synthesized by a plant part and acts to control or regulate the growth and development of the plant. The action and effectiveness of a hormone can depend on the hormone's chemical structure, its amount in relation to other hormones that have competing or opposing effects, and the ways in which it interacts with chemical receptors in various plant parts.
