A thermistor is a type of resistor whose resistance is dependent on temperature, more so than in standard resistors. The word is a portmanteau of thermal and resistor. Thermistors are widely used as inrush current limiters, temperature sensors (negative temperature coefficient or NTC type typically), self-resetting overcurrent protectors, and self-regulating heating elements (positive ...

As the pioneer of the modern-day precharged pneumatic, Daystate has approached the problem of hammer bounce in quite an uncomplicated manner with its slingshot system [1]. It not only leads to a flattening out of the power curve, but also increases the rifle's shots-per-charge-count through the more efficient use of air.

Well, I don't recall anyone being able to trace non-operation to ESD, but that's not saying it can't be a cause. In opposition, Roomba's main-elx board is fitted with Transient Voltage Suppressors, TVS, across: a) the battery terminals, b) the battery's thermistor leads, c) the Home Base charging

contact plates, and d) the rear charging-jack's power leads.
