Spina Bifida Health Care Benefits

Spina bifida is a birth defect where there is incomplete closing of the backbone and membranes around the spinal cord. There are three main types: spina bifida occulta, meningocele, and myelomeningocele. The most common location is the lower back, but in rare cases it may be the middle back or neck. Occulta has no or only mild signs. Signs of occulta may include a hairy patch, dimple, dark ...

Spina bifida - Wikipedia

Signs and Symptoms Signs and Symptoms. Spina bifida may cause both physical and intellectual disabilities that range from mild to severe. The severity of disability depends on the size and location of the opening in the spine, and the extent to which the spinal cord and nerves are affected.

Spina Bifida - MoveForwardPT.com

What is spina bifida. Spina bifida is a neural tube defect. The neural tube is that part of the very young fetus which later develops into the central nervous system and the structures surrounding it.
