Star Discovered In Closest Known

A low-mass exoplanet has been discovered in the orbit of the red dwarf star Ross 128. It's thought to be Earth-like in terms of size and temperature.

We just discovered one of the closest Earth-like planets ever

'Super Earth' discovered in orbit around a nearby star. A 'Super Earth' - a planet much bigger and colder than our world - has been discovered in orbit around a nearby star, scientists ...

Super Earth discovered orbiting nearby star - usatoday.com

The classes of the stars and brown dwarfs are shown in the color of their spectral types (these colors are derived from conventional names for the spectral types and do not represent the star's observed color). Many brown dwarfs are not listed by visual magnitude but are listed by near-infrared J band apparent magnitude due to how dim (and often invisible) they are in visible colors.

List of nearest stars and brown dwarfs - Wikipedia

Astronomers have discovered a binary star system with the closest high-mass young stellar objects ever measured, providing a valuable 'laboratory' to test theories on high mass binary star formation.

Massive twin star discovered snuggling close to its ...

Proxima Centauri (from Latin, meaning 'nearest [star] of Centaurus'), or Alpha Centauri C, is a red dwarf, a small low-mass star, about 4.244 light-years (1.301 pc) from the Sun in the constellation of Centaurus. It was discovered in 1915 by Robert Innes and is the nearest-known star to the Sun. With a quiescent apparent magnitude of 11.13, it is too faint to be seen with the naked eye.

Proxima Centauri - Wikipedia

Media caption Proxima b is the closest known, potentially habitable planet. Nonetheless, the discovery of a planet potentially favourable to life in our cosmic neighbourhood is likely to fire the ...

Neighbouring star Proxima Centauri has Earth-sized planet ...

The sun's closest stellar neighbors are three stars in the Alpha Centauri system. The two main stars are Alpha Centauri A and Alpha Centauri B, which form a binary pair. They are an average of 4.3 ...

Alpha Centauri: Nearest Star System to the Sun | Space

Late last year, astronomers announced that they'd found a super-Earth around Barnard's star - one of the closest suns to our own. The discovery of a planet just six light-years away was ...

Conditions for life might exist on new planet discovered ...

Astronomers have discovered a young star undergoing a rare growth spurt -- giving a fascinating glimpse into the development of these distant stellar objects. Astronomers have discovered a young ...

Newly discovered adolescent star seen undergoing 'growth ...

About the Map This map shows all the star systems that lie within 12.5 light years of our Sun. Most of the stars are red dwarfs - stars with a tenth of the Sun's mass and less than one hundredth the luminosity.

The Universe within 12.5 Light Years - The Nearest stars

Exoplanet discovery. In a press release on February 22, 2017, NASA announced the discovery of the most Earth-sized planets found in the habitable zone of a single star, called TRAPPIST-1. This system of seven rocky worlds--all of them with the potential for water on their surface--is an exciting discovery in the search for life on other worlds.

Largest batch of Earth-size, habitable zone planets ...

Proxima Centauri is extremely distant from its two companions, orbiting them at a distance of around 1.2 trillion miles (1.9 trillion km). Stars like our sun exist for a few billion years, red dwarfs like Proxima Centauri burn their fuel at a much lower rate and can therefore exist far longer.

Proxima Centauri - Facts About Star Proxima Centauri ...

But that's not the smallest star ever discovered. The smallest known star right now is OGLE-TR-122b, a red dwarf star that's part of a binary stellar system.

What is the Smallest Star? - Universe Today

Scientists have known for some time that the Milky Way Galaxy is not alone in the Universe. In addition to our galaxy being part of the Local Group – a collection of 54 galaxies and dwarf ...

What is the Closest Galaxy to the Milky Way? - Universe Today

Astronomers have discovered a world 11 light-years away that may have a surface temperature similar to Earth's. The planet, Ross 128 b, is Earth-sized and is now the second-closest to Earth in ...

Planet with Earth-like temperature discovered orbiting ...

A real-life Hoth is just a couple parsecs away. Astronomers have discovered a frozen super-Earth in the second closest star system to Earth that might resemble the famous snowy world from the Star ...

Frozen super-Earth spotted around second nearest star ...

The Sun--The Closest Star - Astronomy Notes

Black holes are the sharks of the universe. There's a lot of unjustified fear of them and it's difficult to actually encounter one. Space is very big and stellar black holes are not much larger ...

Where Are The Closest Black Holes To Earth? | IFLScience

This artist's impression shows the newly discovered planet orbiting 40 Eridani A, a star just 16 light-years away, and home to the fictional planet of Vulcan in the Star Trek universe.

Researchers discover planet Vulcan from Star Trek — sort ...

Gladly then did goodly Odysseus spread his sail to the breeze; and he sat and guided his raft skilfully with the steering-oar, nor did sleep fall upon his eyelids, as he watched the Pleiads, and late-setting Bootes, and the Bear, which men also call the Wain, which ever circles where it is and watches Orion, and alone has no part in the baths of Ocean.
